PLAGIARISM

Plagiarism: occurs when the work of another is represented, intentionally or unintentionally, as one's own original work, without appropriate acknowledgement of the author or the source. See more on academic integrity and academic misconduct pages on Griffith website.

Plagiarism is a serious offence. Refer to Griffith's policy on Student Academic Misconduct.

Declaration Except where appropriately acknowledged, this assignment is our own work, has been expressed in our own words and has not previously been submitted for assessment. We have also retained a copy of this assessment piece for our own records.

Entity Relationship Diagram

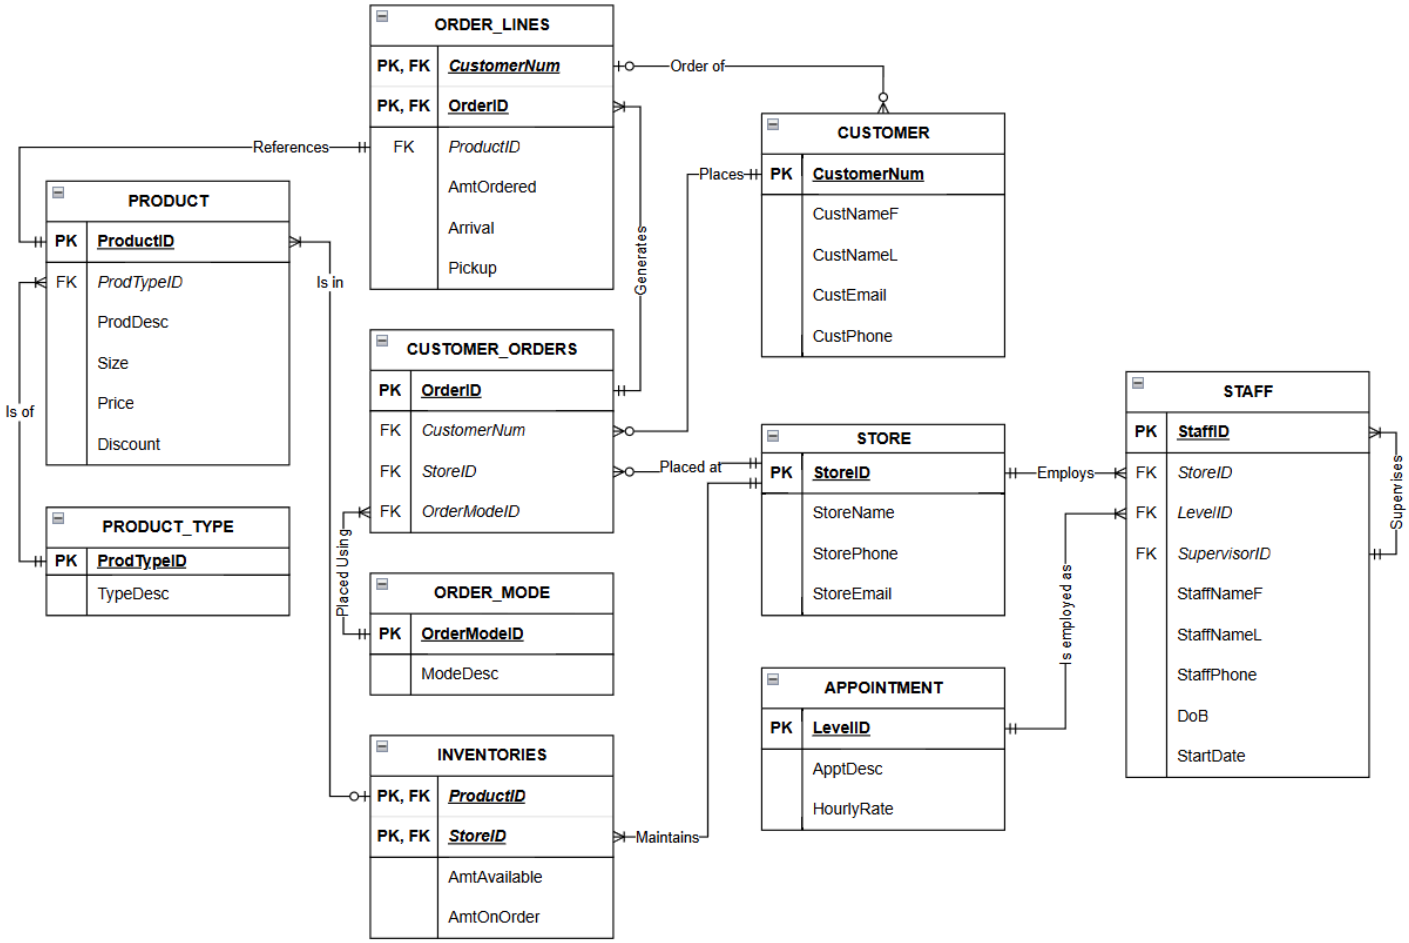

Figure 1.1 Entity Relationship Diagram

Assumptions

We have made the following assumptions regarding the business rules:

- There is a staff member in every appointment level.
- A store will always have a minimum of one inventory.
- There will always be a store.
- Each staff member works at one and only one store.
- Orders can be placed at one and only one store.
- Customers can order a minimum of one thing (thereby generating a minimum of one order line)..
- An order cannot be placed without an order mode, therefore the participation between CUSTOMER_ORDERS and ORDER_MODE is mandatory.
- Product(Size) is in kilograms.
- All staff of an appointment level receive the same hourly rate.

Normalisation

Relation Schema

PRODUCT_TYPE (ProdTypeID, TypeDesc)

ORDER_MODE(OrderModeID, ModeDesc)

APPOINTMENT (LevelID, ApptDesc, HourlyRate)

STORE (StoreID, StoreName, StorePhone, StoreEmail)

CUSTOMER_ORDERS (OrderID,*CustomerNum, StoreID, OrderModeID)*

INVENTORIES (*ProductID, StoreID*, AmtAvailable, AmtOnOrder)

CUSTOMER (CustomerNum, CustNameF, CustNameL, CustEmail, CustPhone)

PRODUCT (ProductID, *ProdTypeID*, ProdDesc, Size, Price, Discount)

ORDER_LINES (*CustomerNum, OrderID*, *ProductID*, AmtOrdered, Arrival, Pickup)

STAFF(StaffID, *StoreID, LevelID, SupervisorID*, StaffNameF, StaffNameL, StaffPhone, DoB, StartDate)

Dependency Diagrams

1. For the PRODUCT_TYPE table, the dependency diagram is:

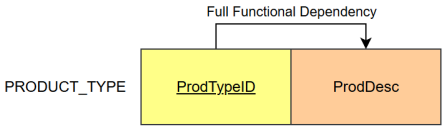

Figure 2.1

The table is in 3NF because it only has full dependency with no partial or transitive dependencies:

- ProdTypeID → ProdDesk

2. For the ORDER_MODE table, the dependency diagram is:

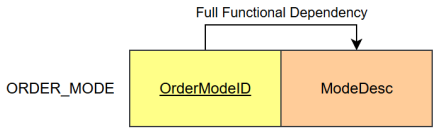

Figure 2.2

The table is in 3NF because it only has full dependency with no partial or transitive dependencies:

- OrderModeID→ ModeDesc

3. For the APPOINTMENT table, the dependency diagram is:

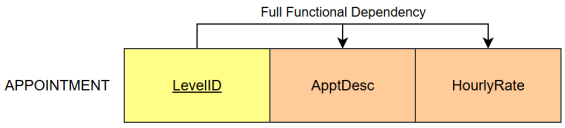

Figure 2.3

The table is in 3NF because it only has full dependency with no partial or transitive dependencies:

- LevelID→ ApptDesc, HourlyRate

4. For the STORE table, the dependency diagram is:

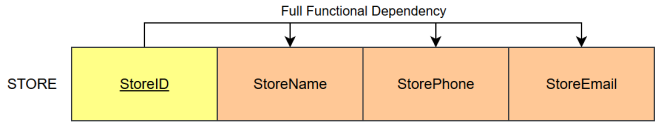

Figure 2.4

The table is in 3NF because it only has full dependency with no partial or transitive dependencies:

- StoreID→ StoreName, StorePhone, StoreEmail

5. For the CUSTOMER_ORDERS table, the dependency diagram is:

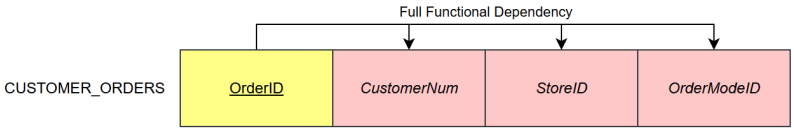

Figure 2.5

The table is in 3NF because it only has full dependency with no partial or transitive dependencies:

- OrderID→ *CustomerNum, StoreID, OrderModeID*

6. For the INVENTORIES table, the dependency diagram is:

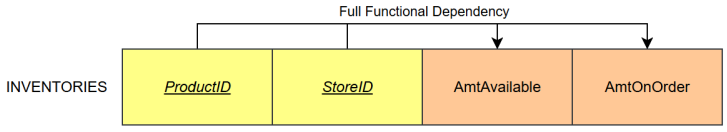

Figure 2.6

The table is in 3NF because it only has full dependency with no partial or transitive dependencies:

- *{ProductID, StoreID}*→ AmtAvailable, AmtOnOrder

7. For the CUSTOMER table, the dependency diagram is:

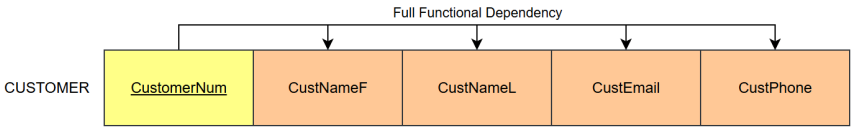

Figure 2.7

The table is in 3NF because it only has full dependency with no partial or transitive dependencies:

- CustomerNum→ CustNameF, CustNameL, CustEmail, CustPhone

8. For the PRODUCT table, the dependency diagram is:

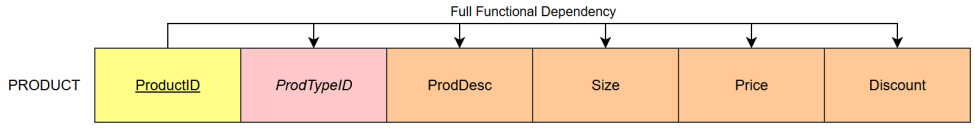

Figure 2.8

The table is in 3NF because it only has full dependency with no partial or transitive dependencies:

- ProductID→ *ProdTypeID*, ProdDesc, Size, Price, Discount

9. For the ORDER_LINES table, the dependency diagram is:

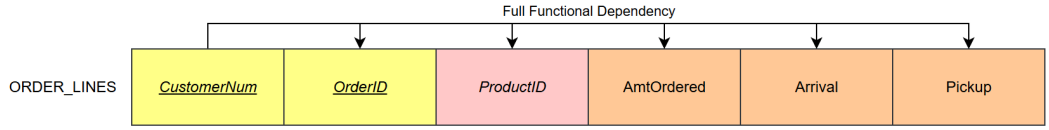

Figure 2.9

The table is in 3NF because it only has full dependency with no partial or transitive dependencies:

- *{CustomerNum, OrderID}*→ *ProductID*, AmtOrdered, Arrival, Pickup

10. For the STAFF table, the dependency diagram is:

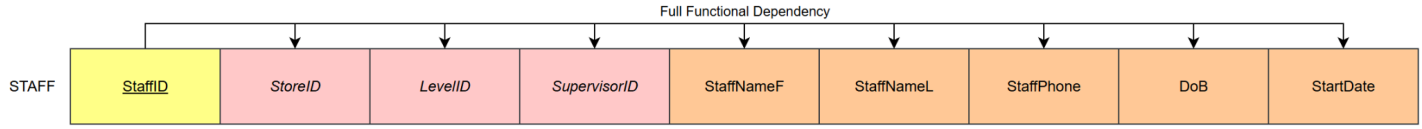

Figure 2.10

The table is in 3NF because it only has full dependency with no partial or transitive dependencies:

- StaffID→ *StoreID, LevelID, SupervisorID*, StaffNameF, StaffNameL, StaffPhone, DoB, StartDate
